Help us to look after the Golf Course

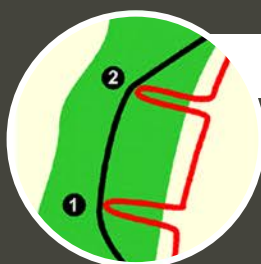

Divots

Repair all divots you make on the fairways – a divot is when you cut a chunk/piece of turf with your strike of the ball. Please pick up the displaced piece of turf and stamp it firmly back into the place it came out of. Press all around the edges with your foot to make sure it will knit together with the existing turf and not cause permanent damage.

Pitch Marks

Repair any pitch mark you make on the green – this is a ball shaped dent on the green where your ball landed – particularly from a height and very often on par 3s. This dent will recover quickly if repaired immediately. Use your pitch reparer or even along tee peg to carefully lift up the depressed dent and make it level with the green around with the base of your putter.

90 Degree Rule

Abide by the 90-degree rule on holes 5-8 during wet conditions. Walk with your trolley to the side of the fairways and leave the trolley there while you walk across to your ball to take your shot. Avoid taking your trolley onto any area of fairway on those holes.

Buggies

Keep buggies (individual and double) well away from greens and their fringes. In wet conditions keep buggies to the rough ground at the side of the fairways - apply the 90 degree rule for all holes.

Trolleys

Do not take your trolley onto the tee areas or too close to the greens. Park your trolley well away when driving or putting.
